

# More Advanced Functionality

- We've implemented computer vision using the Google Cloud Vision API so that we can jump to slides with certain pictures on them. Remember the dog on the Overview slide? Let's **go to the slide with the dog**.
- Say you're a teacher and a student asks what Donald Trump looks like. We've integrated Google CSE (Custom Search Engine) API to help you pull images off the web right into your presentation. **Show me Donald Trump**.
